Technology Consulting Practice

Nantuit Consulting Practice offers a number of specific value-added services for its clients. These ranges from the Senior Executives in charges of Technology, Software Development, and Infrastructure deployment to the hands-on deployment support. These Technology Consulting Services is targeted for the IT Manager and Architect to the CIOs, and individuals primarily focusing in delivering IT solutions against the business charter of the enterprise.

Following are some of the key custom services we offer:

- **Strategy Briefing** - This one-day engagement preceded by a conference call, to level set the business requirements to be accomplished, examining your current IT environment and business objectives. Then it moves into the Center of Excellence in the Cloud, where you'll see the latest Nantuit solutions in action, through powerful demos and scenarios customized to meet your needs. The day includes mutual discovery, tailored product and technology drill-downs, and expert presentations. It culminates with the delivery of a clear and actionable picture of how Nantuit and partner technologies can help you reach your business goals.
- **Architecture Design Session** - This one to three days custom session focuses on your business objectives and aligns them with specific applications of Nantuit and/or Partner software to help you not only meet your goals, but also capitalize on them. We'll provide architectural guidance, consultation on preferred practices, and risk analysis to chief technology officers, architects, and senior members of your development team.
- **Proof of Concept** - In this multi week, in-depth workshop, Nantuit Architects work closely with key members of the client's technical staff to transfer knowledge and prove out customized solutions. This workshop may also include detailed demos and training sessions. Your team will have a private, secure, and fully loaded development suite that's preconfigured prior to their arrival.
- **Assessments** - There are several types of Assessment service offering. An example of this is the Office 365 Migration Assessment Service. This service aims to deliver a comprehensive assessment of your current environment in preparation for a smooth Office 365 migration. The engagement includes a mandatory assessment for infrastructure and optional Office 365 components for Exchange, SharePoint and Lync as appropriate. This will help to reduce your exposure to costly mistakes and delays that can impact end-user experience with Microsoft Online Services.
- **Jump Start Program/ Pilot in Production** - There are several Jump Start Service offerings. An example of this is the Desktop Migration Jump Start. This session allows the clients to walk through the process of creating a technical proof of concept to help you see how Windows 7/8 and Office 2010/2013 — as part of the Microsoft Optimized Desktop—will work in your environment. The Microsoft Optimized Desktop comprises Windows 7/8, Office 2010/2013, Internet Explorer 9/10/11, and the Microsoft Desktop Optimization Pack.

- **Deployment Planning Services (DPS)** - : Nantuit Deployment Planning Services are on-site expertise to help customers plan their enterprise solution deployment. Nantuit DPS Consultants help customers evaluate how best to deploy solutions on-premises, in the cloud, or in hybrid environments. An example of this is the Lync Deployment Planning Services. Customers interested in a specific deployment planning service would be presented with a Statement of Work. Usually, an Assessment is required to generate a Statement of Work.
- **Deployment Services** - This is a custom service offering that is targeted for a specific solution. For example, a customer interested in deploying Office 365 for 2500 users in 3 locations, in the US, would be presented with a custom proposal detailing the project that would include a proposal and the respective Statement of Work based on the contract the client signs off.
- **Health Check** - Nantuit Service Consultants provide Health Check as a proactive service that delivers prescriptive problem identification and suggested resolution guidance for selected components of your enterprise solution implementation, such as, Active Directory, Exchange, Lync, Office 365, CRM, etc. The Health Check is designed to uncover potential performance and application configuration risks and provide recommendations for any identified issues.

In addition to Technology Consulting Services, we offer Business Consulting services and specific solutions in the area of Security, Hybrid Cloud, Collaboration, Mobility and software development.

PRACTICE LEADER: QUAZI ZAMAN

Quazi is a business executive with 20+ years of experience in the technology field with professional experience in software development and management, technology consulting and senior management roles in leading firms such as Microsoft, Unisys and others towards deploying standards compliant systems and solutions.
