

Solutions Overview

Key Solutions:

- **Security Solutions**
 - Identity & Access Management
 - Hybrid Cloud Identity
 - Secure Device Deployment
 - Secure Teleworking
 - Hybrid Data Protection
- **Hybrid Cloud**
 - Identity and Access Management
 - Hybrid Cloud Identity
 - Virtualization & Private Cloud
 - Secure Device Deployment
 - Managed Hybrid Data Center
 - Business Continuity
- **Collaboration**
 - Secure Messaging and Compliance
 - Unified Communications
 - Enterprise Portals and Social Strategy
 - Big Data for Business Analytics
 - Customer Relationship Management
 - Portfolio & Program Management
- **Mobility**
 - Enterprise Mobility
 - Secure Device Deployment
 - Mobile App Development
- **Development**
 - User Experience for Modern Applications
 - Modern Web Applications
 - Mobile App Development
 - Custom Applications Development - .Net & Java
 - Enterprise Integration

NANTUIT Hybrid Cloud Solutions

Nantuit Consulting Services offer value-added services to clients interested in extending their datacenter with an IaaS (Infrastructure as a Service) provided by Microsoft, Amazon or VMware. Windows Azure is an open and flexible cloud platform that enables you to quickly build, deploy and manage applications across a global network of Microsoft-managed data centers. You can build applications using any language, tool or framework. And you can utilize your public cloud applications with your existing IT environment.

Following are some of the key Hybrid Cloud Solutions we offer:

- **Identity and Access Management** - Organizations having multiple identity systems and standards generate higher cost. Windows Azure Active Directory delivers enterprise-level identity services that help streamline directory and access management in the cloud, provides a seamless sign-in experience to cloud resources and enhanced security with Multi-Factor Authentication. Nantuit Identity and Access Management solution helps organization take control of their environments and reduce complexity. Nantuit consultants provide guidance to organizations from strategy development to deployment, in how to optimize their existing IT infrastructure.
 - Identity Aggregation and Synchronization
 - Password Management
 - Provisioning and Workflow
 - Intranet and Extranet Access Management
 - Simplify access to any app, from virtually anywhere
- **Virtualization and Private Cloud** - Over 95% of the Enterprise customers use Microsoft Active Directory for on premise Directory Services, for authentication and authorization, besides policy management and other capabilities. With the advent of Cloud based solutions, specifically Software as a Service, it is imperative for all organizations to enable the foundation service, Hybrid Identity Management, to leverage the elasticity and flexibility of the Cloud based services in a secure manner.
 - Windows Azure Directory Service provides directory, identity management and access control capabilities for cloud applications.
- **Secure Device Deployment** - Nantuit Secure Device Deployment solution provides organizations an optimized guidance to upgrade their Windows XP desktops to Windows 7 or 8x, Linux, Mac and BYODs, such as, Android, iOS, Windows RT or Windows Phone.
 - Built on Microsoft Solutions, such as, Systems Center Configurations Manager, Windows Intune, MDT, etc.
 - Hybrid Cloud solution, spanning both on premise and cloud based services.
 - Cloud only solutions for BYOD and Windows desktops.
 - Leveraging the System Center Service Manager 2010 Dashboard (organizations can reduce costs and improve IT responsiveness by keeping track of incidents and problem resolution, change control, and its

configuration management database—with an easy to use, customizable Web interface.)

- **Managed Hybrid Data Center** - Nantuit IaaS enabled Data center Solution leverages Microsoft System Center 2012 R2. This helps you realize the benefits of the Microsoft Cloud OS by delivering unified management across your data centers, service provider data centers, and Windows Azure. With System Center 2012 R2 you can:
 - Utilize enterprise-grade management capabilities with best-in-class performance for your Windows Server environments and first-party Microsoft workloads (SQL, Exchange, and SharePoint).
 - Reduce data center complexity by simplifying how you provision, manage, and operate your infrastructure
 - Enable delivery of predictable application SLAs through a relentless focus on optimizing your applications and workloads

- **Business Continuity** - Nantuit Hybrid Data Protection solutions is targeted for customer looking at securing their organizational data in a hybrid cloud environment using Windows Azure. Windows Azure provides scalable, durable cloud storage, backup, and recovery solutions for any data, big and small. Windows Azure works with the infrastructure you already have to cost-effectively enhance your business continuity strategy as well as provide storage required by your cloud applications.
 - StorSimple cloud-integrated storage (CiS) provides primary storage, backup, archive, and disaster recovery. Combined with Windows Azure, this hybrid cloud storage solution optimizes total storage costs and data protection for enterprises.

Furthermore, to successfully deploy these NANTUIT Enterprise Solutions, we offer Business and Technology Consulting Services.

If you are interested in any of these Services or Solutions, please review appropriate brochures, contact us at Nantuit offices or visit us at www.nantuit.com
